

Naseem Ali

American Canyon, CA | (707) 299-8703 | naseem96ali@gmail.com | www.linkedin.com/in/naseemali22

MSBA student with a STEM and engineering background, building experience in data analytics through SQL, Python, R, and applied projects. Aspiring data analyst leveraging SQL, Python, and machine learning to support business, operations, and marketing analytics.

EDUCATION

Master of Science in Business Analytics

UC Davis | August 2025 - July 2026

Bachelor of Science in Bioengineering

UC San Diego, San Diego | September 2019 - June 2022

GPA: 3.25

SKILLS

Programming: Python, SQL (MySQL), R, Matlab

Data & Tools: Databricks, Power BI, Excel, Jira, Asana, Outlook, Teams

Analysis & Modeling: Regression, Optimization, A/B Testing, Data Cleaning, Visualization

Engineering & Design: SolidWorks, AutoCAD

WORK EXPERIENCE

Data Analytics Practicum Intern | August 2025 - Present

Lagunitas Brewing Company - San Francisco, CA

- Built a Databricks pipeline for API-based collection, text preprocessing, and feature engineering on 10K+ Twitter/X posts to analyze beer-related consumer conversations.
- Developed a regex-based NLP and LLM-driven sentiment analysis framework to classify Twitter posts into various topics and evaluate brand perception across conversation segments.
- Applied PCA and K-Means clustering to identify consumer conversation patterns and built an opportunity scoring model combining sentiment, engagement, and tweet volume to prioritize marketing activation opportunities.
- Designed interactive Power BI dashboards connected to Databricks Unity Catalog tables to visualize sentiment trends, consumer segments, engagement metrics, and marketing opportunity insights for stakeholder reporting.

Quality Engineer Technician | June 2023 - January 2025

Tesla - Fremont, CA

- Analyzed defect trends using Excel and Tableau-based dashboards to identify root causes and support data-driven quality improvement initiatives across manufacturing processes.
- Performed root cause analysis using FMEA and DMAIC to support process improvements and corrective action plans.
- Designed and prototyped 10+ tooling jigs and car covers in SolidWorks as countermeasures to mitigate defects and improve manufacturing quality.
- Worked with suppliers and internal teams to coordinate tooling/jig projects, request quotes, and support lineside trials and pilot testing with jig prototypes.
- Collaborated cross-functionally across stamping, paint, and general assembly to track and resolve quality issues across departments.

Quality Engineer | October 2022 - February 2023

Cunico, A BWXT Company - Long Beach, CA

- Led quality assurance for naval-grade manufactured components, ensuring compliance with PPAP and tolerance verification using micrometers, calipers, and thread gauges.
- Reviewed nonconformities and managed documentation for process control compliance.

PROJECTS

Web Scraping & SQL Data Integration Project | March 2026

- Collaborated with peers to scrape data from Metrolist (MLS) and Redfin using Selenium, and built a data pipeline by combining 6,800+ San Francisco real estate listings across MLS, Redfin, and Kaggle datasets.
- Designed and implemented a 3NF relational database in SQLite with 9+ tables and junction tables to support many-to-many relationships, enabling efficient and scalable querying.
- Enabled cross-source analysis by integrating historical and current listing data, supporting queries for pricing trends and property comparisons.

Machine Learning & AI Project | March 2026

- Collaborated with peers to apply predictive and unsupervised models (Linear Regression, PCA, K-Means) to identify key drivers of property prices in San Francisco.
- Applied PCA and Kmeans clustering to reduce dimensionality and segment housing data, identifying key drivers of property prices and distinct market segments.

Data Management SQL Project | September 2025 - December 2025

- Built a fully normalized SQL database from a 60k-record recipe dataset to uncover health trends, efficiencies among cooking methods, and ingredient patterns among cuisines.
- Designed ERD schemas and relational tables to support joins, aggregations, and window functions for analytical querying.
- Generated insights by linking health flags to recipe ingredients and preparation methods across cuisine.
